

12) How many times is the loop body executed in a do loop?

→ Ans:

13) Write a do loop that displays the numbers from 100 to 110.

→ Ans:

```
int start = 100;
```

```
do {
```

```
    cout << start << endl;
```

```
    start++;
```

```
} while (start <= 110);
```

14) Write an if statement that prints Yes if a variable age is greater than 21:

→ Ans:

```
int age;
```

```
if (age > 21)
```

```
    cout << "yes";
```

15) The library function `exit()` causes an exit from

a) the loop in which it occurs.

b) the block in which it occurs.

c) the function in which it occurs.

d) the program in which it occurs.

→ Ans: d) the program in which it occurs.

16. Write an if...else statement that displays Yes if a variable age is greater than 21, and displays No otherwise.

→ Ans:

```
int age;  
if (age > 21) {  
    cout << "Yes";  
} else {  
    cout << "No";  
}
```

17. the getch() library function

- a) returns a character when any key is pressed,
- b) returns a character when Enter is pressed.
- c) displays a character on the screen when any key is pressed.
- d) does not display a character on the screen.

→ Ans: a) returns a character when any key is pressed.

18. What is the character obtained from cin when the user presses the Enter key?

→ Ans: '\n'

19. An else always matches the preceding if, unless the if is surrounded by braces.

20. The else-if construction is obtained from a nested if...else by reformatting.

21. Write a switch statement that prints Yes if a variable ch is 'y', prints No if ch is 'n', and prints Unknown response otherwise.

→ Ans:

```
char ch;  
switch (ch) {  
    case 'y':  
        cout << "Yes";  
        break;  
    case 'n':  
        cout << "No";  
        break;  
    default:  
        cout << "Unknown";  
}
```

22. Write a statement that uses a conditional operator to set ticket to 1 if speed is greater than 55, and to 0 otherwise.

→ Ans:

```
int ticket;  
int speed;  
ticket = (speed > 55) ? 1 : 0;
```

23) The && and || operators

- a. Compare two numeric values.
- b. Combine two numeric values
- c. Compare two Boolean values.
- d. Combine two Boolean values.

→ Ans:

24. Write an expression involving a logical operator that is true if limit is 55 and speed is greater than 55.

→ Ans: int limit, speed;

limit == 55 && speed > 55

25. Arrange in order of precedence (highest first) the following kinds of operators; logical, unary, arithmetic assignment, relation, conditional.

→ Ans: ① Unary

② arithmetic

③ relational

④ logical

⑤ Conditional

⑥ assignment

26. The break statement causes an exit

a) only from the innermost loop

b) only from the innermost switch

c) from all loops and switches.

d) from the innermost loop ~~and~~ or switch.

→ Ans: d. from the innermost loop or switch.

27. Executing the continue operator from within a loop causes control to go to the top of the loop.

28. The goto statement causes control to go to

a) an operator

b) a label

c) a variable

d) a function

→ Ans: b) a label
