

7.You can convert temperature from degrees Celsius to degrees Fahrenheit by multiplying by 9/5 and adding 32. Write a program that allows the user to enter a floating-point number representing degrees Celsius, and then displays the corresponding degrees Fahrenheit.

Ans: `#include<iostream>`
`using namespace std;`

`int main(){`
`float celsius, fahrenheit;`

`cout << "Enter temperature in Celsius: ";`
`cin >> celsius;`

`fahrenheit = (celsius * 9.0 / 5.0) + 32;`

`cout << "Temperature in Fahrenheit = " <<`
`fahrenheit;`

`return 0;`
`}`
