

Assignment (Page 25,26)

1. Pascal, BASIC, and C are **procedural** languages, while C++ is an **object-oriented** language.
2. A widget is to the blueprint for a widget as an object is to
b. a class.
3. The two major components of an object are **data** and functions that **operate on that data**.
4. In C++, a function contained within a class is called
a. a member function.
5. Protecting data from access by unauthorized functions is called **data hiding**.
6. Which of the following are good reasons to use an object-oriented language?
a. You can define your own data types.
d. It's easier to conceptualize an OO program.
7. **Objects** model entities in the real world more closely than do functions.
8. True or false: A C++ program is similar to a C program except for the details of coding.
False.
9. Bundling data and functions together is called **encapsulation**.
10. When a language has the capability to produce new data types, it is said to be
d. extensible.
11. True or false: You can easily tell, from any two lines of code, whether a program is written in C or C++.
False.
12. The ability of a function or operator to act in different ways on different data types is called **polymorphism**.
13. A normal C++ operator that acts in special ways on newly defined data types is said to be
d. overloaded.
14. Memorizing the new terms used in C++ is
b. something you can return to later.
15. The Unified Modeling Language is
b. a way to look at the organization of a program.
